

TAS launches free videos for matrices

In order to assist Grade 12 learners keep up with their studies, The Answer Series (TAS) has launched a series of free educational videos covering a selection of subjects.

"Schools need to adapt to a dual delivery of in-person and digital teaching, and learners need to take charge of their own learning process. Our goal is to help them do just that, with the launch of The Answer Series (TAS) free videos," says TAS CEO, George Eadie.

"We have focused on term two content for matric students as so much is at stake for them – not just their final year of school; but also consequent opportunities for further studies or jobs next year."

The video courses are created by subject specialists - teachers and authors with years of experience - some of whom wrote TAS study guides. They cover five CAPS subjects: Physical Sciences/ Fisiese Wetenskappe (in Afrikaans and English), Mathematics, Mathematical Literacy, Life Sciences and Economics (in English only).

The free video courses are available on the [TAS website](#) and work well in conjunction with the TAS study guides, as references are made to worked examples and practice exercises. "Think of them as the basecamp for important work in the curriculum – each one is a 10-minute, high impact way to master your work," adds Eadie.

#KagisoRadioTeachers campaign takes teaching to the airwaves

8 May 2020

This new product from TAS will also provide support to teachers, who are under severe pressure to catch up on time missed. The videos offer a quick and effective way to fill gaps for some of the traditionally toughest subjects.

“More and more, teaching is improved when learners move through the foundations of a topic on their own and at their pace; and then come to class for the in-person troubleshooting. It’s called ‘flip the classroom’ and we hope to see teachers and learners adopting this approach with the videos,” comments Eadie.

Learners are encouraged to provide feedback on the videos to assist the TAS team's efforts to improve their products and support for students.
